

Automatic Labelling Machine Servo models

Touted by one of the leading tube manufacturers as "incorporating all things you would want in one machine" the Compact TU-8 is designed to label plastic tubes with clear or opaque labels which can be randomly wrapped onto the tubes or oriented to "flip-caps" or "registration eyemarks". The tube labeller has been designed to operate as a Stand-alone unit, however infeed and outfeed conveyors can be added, if required.

Compact 900 TU-8 Labeller

With these Labelling Machine models the Servo motor drives ensure fast and accurate label placement efficiency at all times.

Semi-automatic Labelling Machines

The C-150 is an Electric Label Dispenser, manually operated by lifting the pre-dispensed label, as the label is removed a motor is activated. The remaining attached part of the label is dispensed and the next label is ready for pickup. While this is happening the backing paper is being rewound for safety and quick, easy disposal.

Compact - 150

The Carton Security Labeller is manually operated by swiping a carton over the top plate, a guide provides positioning of the carton, the label is fed out electrically, when the carton comes in contact with the application roller the label is applied to the front face of the carton and the underside, while the backing paper is being rolled up automatically.

Compact - CSL

The Compact-a-Wrap is a portable semi - automatic Labeller. It is designed to apply one or two labels to round - parallel sided containers. If required a clever orientation device allows Over Labelling or Registration Labelling.

Compact-a-Wrap

The Compact-a-Tube is a portable semi automatic Labeller. It is designed to apply one or two labels to cylindrical plastic or metal tubes. It is economically priced, industrially built and provides unparalleled productivity without compromising quality. Built for ease of use and long term reliability the Compact-a-Tube is as tough as it looks, made from Stainless Steel and Aluminum.

Automatic Labelling Machines

Compact 600 F/B Labeller

The Three Roller - Wrap Labeller provides a quality wrap application of labels onto cylindrical containers. The key advantage of this style of machine is the quality of application, full wrap labels can be overlapped with perfect alignment. This is also the machine you require when you are trying to achieve that "No Label Look". The labels can be partial or full wrap, spot or front and back labels.

Compact 600 W Labeller

The Compact Top (Top Labeller) applies labels to the top of a product that can be laid down on a conveyor. This could be a carton, a sheet of paper, a block of cheese or a jar lid. The Top 2 indicates 2 labelling heads, the machine can be fitted with one labelling head. The machine can be operated in an existing line or as a Stand-alone unit.

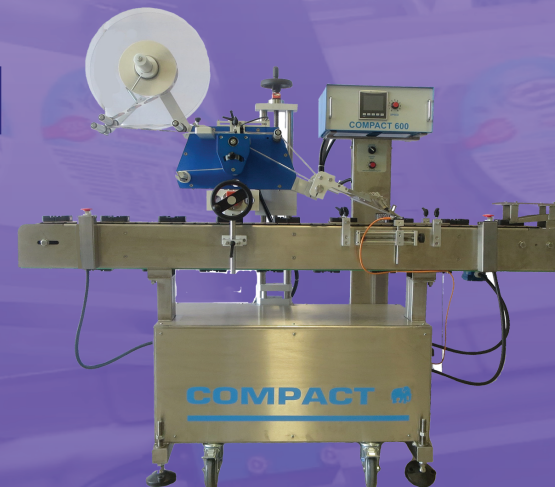

Compact 600 Top Labeller

The criteria customers look for in a Front/Back Labeller is ease of setup, accurate & consistent label placement and reliability. These are all the features built into the Compact FB range of machines. When labelling large Jerry cans - possibly with only a front label, this machine can be supplied as a Front only - F. While the FB style of machine permits the labelling of Non-Round / Oval containers, it is common for customers to require the capability of Wrap as in Combination style machines. The machine can be operated in an existing line or as a Stand-alone unit.

Compact 600 3/R Labeller

The Compact Wrap Around or WV (Vacuum), provides speed and flexibility when wrapping labels to cylindrical containers. The key advantage of this style of machine over the 3R range is speed. The labels can be partial or full wrap while the machine can be operated in an existing line or as a Stand-alone unit.

COMPACT ADVANTAGE

Our labelling machines are purpose built for your exact labelling requirements. This gives you the advantage of a cost-effective labelling solution.

Further, without unnecessary features which would drive up cost, you will see that labelling machines from Compact Labelling do indeed take comparatively less floor space to similar competing products.

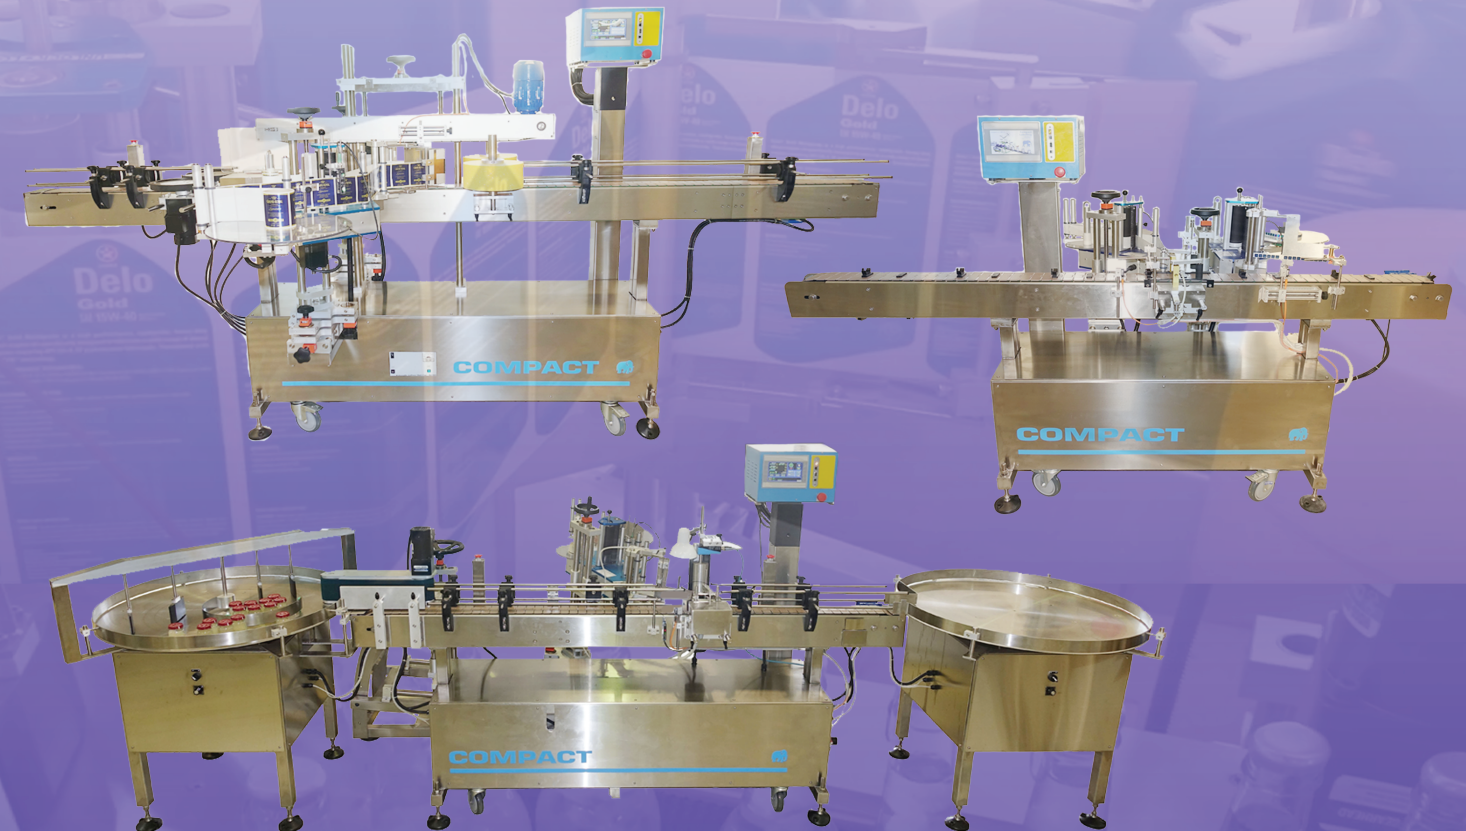

Our goal is to provide you with the most accurate and fastest customized labelling machine that will allow you to confidently label your products.

We design, build and thoroughly test your labelling machine before delivery and installation. Our team of well trained technicians will provide you with intensive on-site operator training and subsequent after-sales service and support.

Compact Quality Assurance

Labelling Machine, COMPACT 900 models

The COMPACT 900 Labelling Machine models are equipped with touch screen HMI and the label dispensing motors are fast and accurate stepper or servo motors.
